

Setting up the COBI.wms Emulator

Requirements

- Android Studio
- COBI.wms APK file

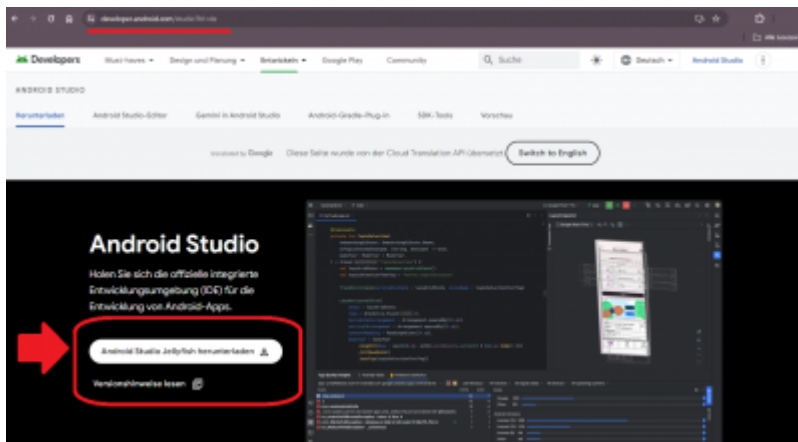

Step-by-step guide to installing the Android Studio Emulator and setting up a virtual machine.

Step 1

Visit the website [Android Studio](#)

Step 2

Download the latest version of Android Studio.

Step 3

Install the downloaded .exe file.

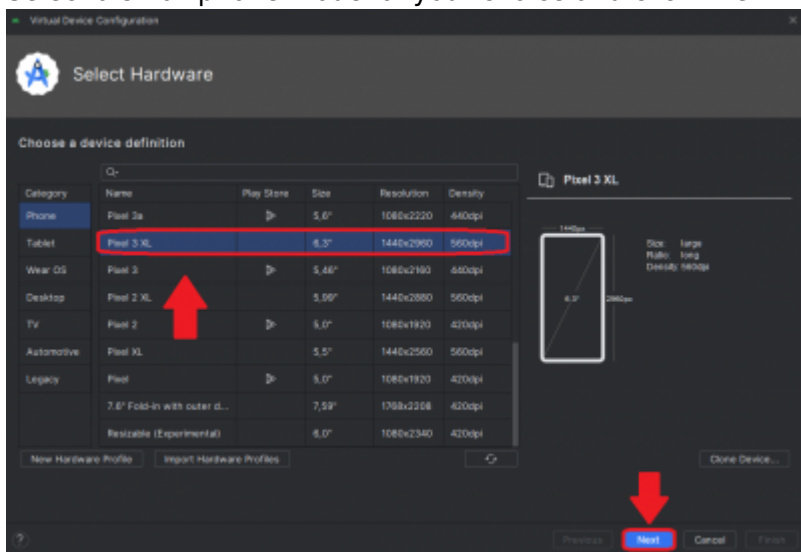

Step 4

Open Android Studio and navigate to the “Device Manager” tab. Click the plus icon and select “Create Virtual Device”.

Step 5

Select a smartphone model of your choice and click “Next”.

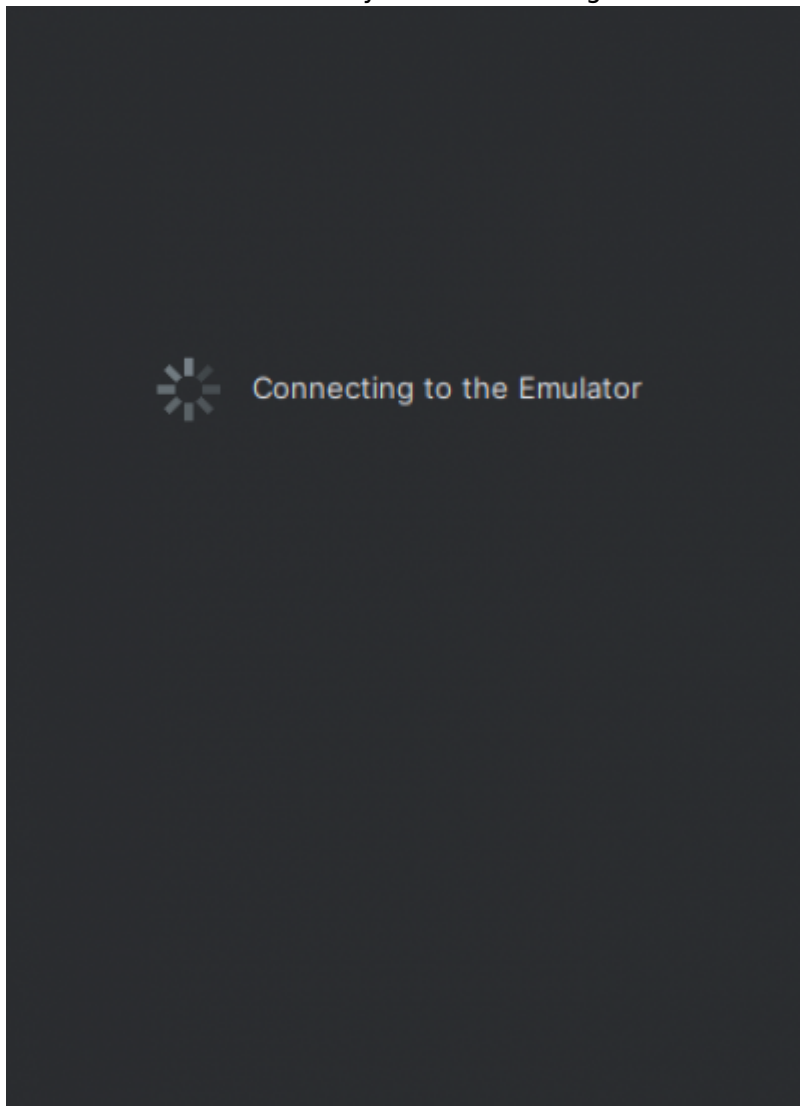

Step 6

Select an operating system (we recommend Android 8.1 or higher).

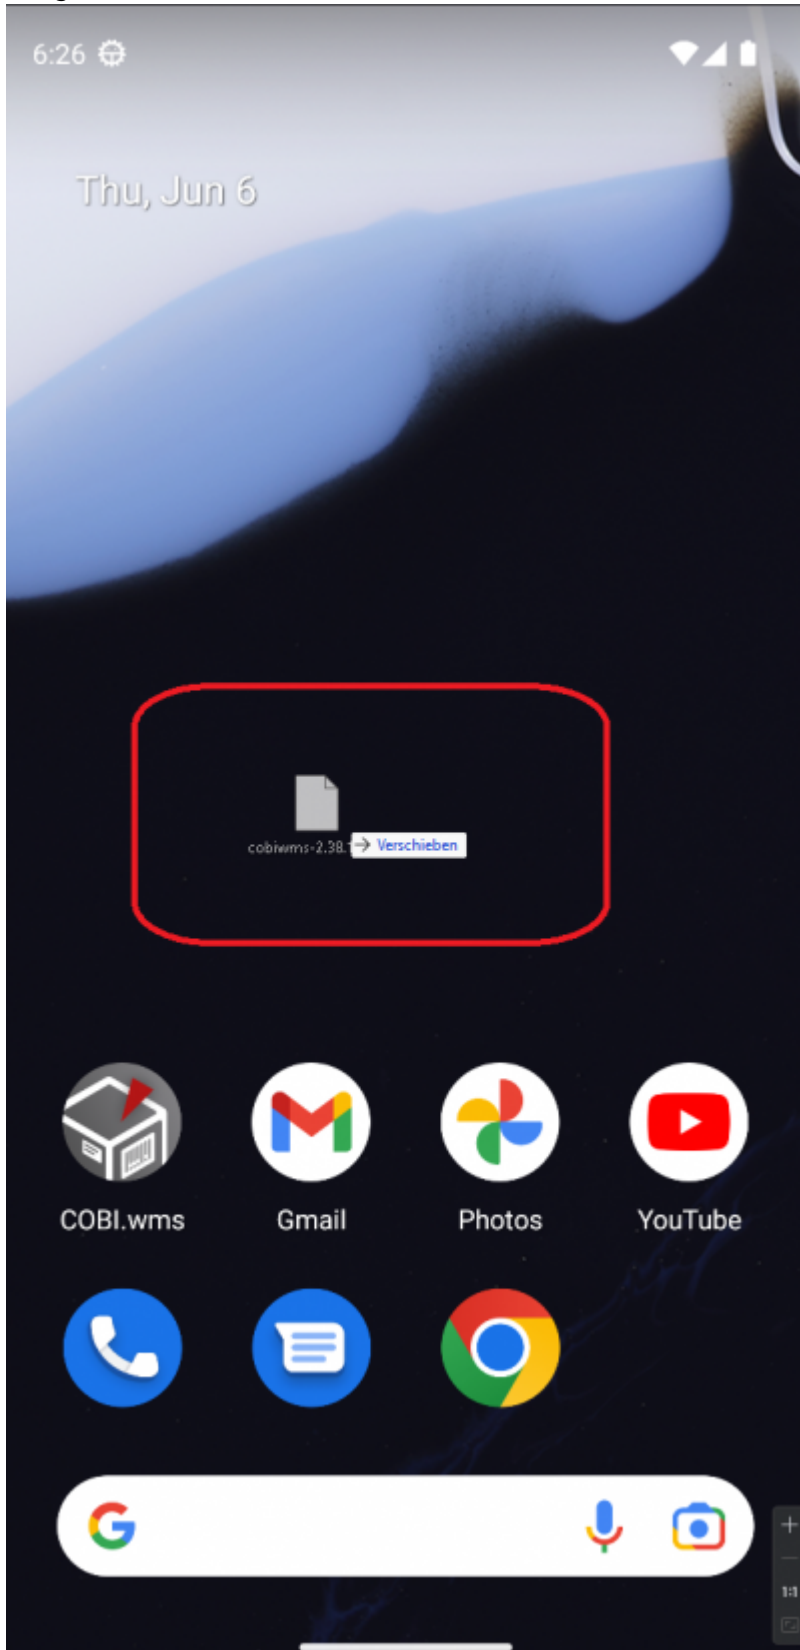

Step 9

Note that the first start may take a little longer.

Step 10

Drag the COBI.wms APK file into the virtual machine to automatically install the app.

Step 11

Configure COBI.wms with the desired database configuration (On-Premise or Cloud). The diagram shows the On-Premise version.
