Release Notes

Version 2.0.0.4 (November 2025)

- New Database Architecture: COBI.time now stores time data in its own PostgreSQL database instead of directly in SAP. \\This significantly improves performance, stability, and independence from the SAP database server.

- New Time Report Layout:
  - Redesigned time report view with a clear structure and new color logic (green = completed weeks / yellow = current weeks / blue = absences).
  - Fully revised column headers for better readability.
  - Integrated summary section at the end of the table, showing total vacation, used vacation (previous and current month), and remaining vacation.
  - New export options: separate EXPORT (single report) and EXPORT ALL (complete report) buttons.
  - Improved calculation logic for target times and time differences.

- UI & Design:
  - Modernized interface for time reports with improved visual separation between calendar weeks.
  - Unified color and font styling.
  - New logic for color-based highlighting of absences and holidays.
  - Adjusted to the overall COBI.design guideline.

- Performance Improvements:
  - Faster loading times for monthly reports through asynchronous data processing via PostgreSQL.
  - More stable handling of large datasets in time and absence modules.

- Enhancements & New Features:
  - Extended calculation and storage of break times and target time corrections.
  - Improved table filtering and sorting options (preparation for dynamic column filters).
  - Extended permissions for reporting and management functionalities.

- Technical Changes:
  - Adjusted API interfaces for the new database structure.
  - Revised Service Layer calls for synchronizing employees, time models, and absence types.
  - New logging mechanisms for database actions (PostgreSQL logging).

- Bugfixes & Stability:
  - Fixed rounding errors in time difference calculations.
  - Improved display of absence times in reports.
  - Minor UI fixes (tooltips, column widths, translations).

Version 1.9.6.1h (October 2025)

- New wiki entry for Service Layer configuration: instructions for a performant and stable installation
- New option "Pin unlock": the start screen can be secured by a PIN (defined in the .env file on the server)

- Terminal mode: configurable seconds until automatic logout in the startup screen
- New language added: French
- Day models: possibility to define overall or fixed break times

- Week models:
  - Option "Automatically deduct statutory break times"
  - Flexible capping of start and end times (e.g. automatic login and logout based on defined limits)
  - Deactivated week models can be displayed

- Absence management: new option for managers – unpaid absence
- Improvements in the UI / naming of various buttons and fields
- User management: new rights available
  - Management
  - Absence overview
  - Reporting

- Time model closing: new checkbox "Carry over time account balance from previous time model"
- User rights: new search and filter functionality
- New standalone module: Cost centers
- Selection of financial projects and cost centers from SAP now possible
- Attendance overview: display of online status (green/red dot)
- Time reports: extended storage and display of break times
- New module: Time report
- New modules: Management and Reporting
- Bug fixes, performance and stability improvements

Version 1.9.4.1 (May 2024)

- Possibility to post to cost centres
- Selection of employees in the manual time recording module
- Comment field for approval or rejection of absence requests, which is also displayed in the applicant's notifications
- Absence management: differentiation between paid and unpaid absences
